  - Online Research
- What are the best fixtures that will fit my needs?
  - Most common used spotlight is a "3 LED"
- What intensity/color/beam will provide the best result?
  - Location of Transformer
- Where will the power come from?

Lighting Techniques to illuminate my Garden

- Note the various lighting techniques located on the Landscape Lighting Plan below.

  - **Aesthetic & or “Living” Lighting:**
    - Uplighting: (aka: Spot lighting) Most popular, Used to highlight specific plants/garden accessories, Fixtures are placed below the landscape features.
    - Down Lighting: (aka: Moonlighting) Creates a soft illumination where the placement of fixtures is above the landscape.
    - Cross Lighting: Provides soft lighting effects through horizontal positioning
    - Accent: Utilize a combination of Spot & Cross lighting to highlight an area located in a dark space in the landscape.
    - Silhouette: Fixtures are placed behind the object to be lit up. The placement causes a shadow effect often placed near the residence.
    - Bistro Lighting: Creates a festive ambiance to the garden area providing a subtle yet charming glow.

  - **Safety Lighting:**
    - Path Lighting: Placement along pathway & is essential to navigating hardscape. May also be used where there are no trees to uplight.
    - Step Lighting: Small fixtures adhered to steps and decks to provide safety.
